Background, objectives, conditions and parameters

Whether new-build or renovation, projects in a 24/7 environment are long-running and costly. The background, objectives, conditions and parameters have to be clearly defined before work starts because the ideas and wishes of the people involved often diverge quite widely.

Not infrequently, there are technical reasons for renewing a control center, for instance because a system has exceeded its useful life, spare parts are no longer available, or support has been discontinued. With additional requirements to be met, more workplaces are often needed.

A control center performs a large number of time-critical processes and different functions, which are supported by various technical systems. If one factor changes, the others are also affected. Building a new emergency call center or renovating a command room poses interdisciplinary challenges, above all in terms of technical planning.

The advantages for you

A preliminary study gives everyone involved a solid basis to get a better understanding of the tasks ahead. The study provides evalua-

tion criteria for the project, along with potential solutions, as well as approximate estimates of costs and deadlines.

Within a reasonable cost framework, an assessment will be made of where the project boundaries lie, which of the people affected should be involved, and which objectives are to be pursued within which time period. The project process, dependencies, opportunities and risks are also addressed.

Conrom's expertise

Conrom has built a broad and proven track record through working on different projects and is familiar with the complex interactions that take place in a control center. As customer, you will be involved and kept up-to-date on progress and interim results and can follow first-hand how the study evolves.

- 24/7 projects are long-running and costly.
- Objectives, conditions and parameters have to be clearly defined.
- Preliminary studies provide you with the basis for making decisions on your 24/7 project.
- Conrom has a proven track record and is familiar with the complex interactions.
